# Airport Security – Why it's Important

With the Transportation Security Administration – otherwise known as TSA – catching a lot of flak lately over allegations of downright physical and emotional abuse, it behooves us to take a look at Airport Security and to try and understand its importance and relevancy.

It's not hard to comprehend the importance of airport security when one takes into consideration the amount of commercial airline traffic

that is in the skies over the US each and every day. Believe it or not, there are over thirty thousand flights in the skies over the US on a daily basis. Since this figure is from 2004, it is safe to assume that there is even more traffic in the skies.

While Osama Bin Laden may be dead, this doesn't make airport security any less relevant; Osama was just one element of a terrorist organization. While his presence is no longer

that is in the skies over the US each and every day. Believe it or not, there are over thirty thousand flights in the skies over the US on a daily basis. Since this figure is from 2004, it is safe to assume that there is even more traffic in the skies.

So how do we take control and make our airports more secure? The answer to this is not easy, and ten years after America suffered its worse terrorist attack in history, there is still

no concrete answer. Ideally, an airport security system will have multiple layers and it will also perform multiple functions.

When dissecting an airport's security system, it is important to note that the TSA is just one component of a multifunctional, multilayered security system. An airport's security system is multifunctional in that there are many things that must be checked and checked again. Not only are

passengers scrutinized, but luggage is also gone over with a fine toothed comb, as are the airplanes themselves.

Not only are airport's security systems multifunctional, they are also multilayered. At a minimum, passengers are checked three times: they are first checked at the check in counter, then again by TSA and finally they are checked again as they board the plane. Luggage is also scrutinized in much the same manner. In reality, an

airport's security system is comprised of every person they employ, so long as they are alert and report anything out of the ordinary.

Another layer of security is that airports have access zones, where only certain individuals have access to certain zones. For instance, baggage checkers won't have access to zones that maintenance crews have access to and vice-versa. There are many ways to implement such a system, but one

such way is via **HID access cards**.

**HID access cards** are cards that have been preprogrammed to grant or deny access to certain zones. While this can take some thought, zones can be setup simply by equipping a door to unlock when an employee has an **HID access card** with the appropriate clearance. Though easily rectified, if

an employee's HID access card is not programmed properly, it can prevent them from accessing their predetermined zone.

# Safe and Secure Travel

As generations have passed, more and more modes of transportation have come to being. It was not that long ago where boats and stage coach were the preferred method of transportation; now, we can choose from any of the following means of transportation: car, bus, train, plane, boat, subway, etc. While the methods of transportation have increased, so has the number of passengers who are in need of transportation; and with that, so has the need for one to look

out for their own personal safety when traveling.

Safe and secure travel is not something to be taken lightly; in this day and age, especially overseas, the unexpected can happen at any moment. Should you choose to take the following tips into consideration; the affects of an unexpected incident can be dampened.

No matter how you choose to travel, one of the keys to ensuring

personal safety is to be aware of your surroundings at all times. As trivial as this may seem, this point cannot be underscored enough; never assume that your immediate surroundings are secure.

In being aware of your surroundings, you need to know who you are travelling with and know where they are at all times; it is equally important to know who is not in your side.

Another key to ensuring one's personal safety is to know where you are going and to act like it. People of ill repute tend to prey on the weak and this includes those who are lost; therefore, it is crucial that, when you are traveling, those who surround you are acutely aware of the fact that you are not lost. In putting this to practice, never put yourself in a position where you can become lost.

*Be prepared.* The Boy Scout's motto

has never been more applicable then here and now. While it is true that you will never be able to prepare for everything, it doesn't hurt to brainstorm before commencing your travel plans and attempt to accommodate the unexpected. An easy way to be prepared is to pack extra clothes; you never know when that airplane toilet may backfire on you! Another easy way to prepare is to make sure that you have a backup funding source that is readily accessible from anywhere in

the world. Alternatively, you could also pick up some travel insurance.

In preparing for the unexpected, be aware of what you are bringing with you and be able to recognize immediately when something is missing. The sooner you can report an item's absence the greater the odds of that item being returned to you. If you are bringing many valuables with you on your trip, you may wish to consider purchasing an **ID printer**.

A zebra printer is an ID printer that prints out bar codes which you can then affix to your valuables. If you plan on becoming an avid traveler, an ID printer ought to be one your first investments in personal safety and security.

A critical component of disaster preparedness is an emergency plan. As you contemplate your upcoming travels, have an emergency plan for everything. While you don't need to have this plan drawn up before hand, it is definitely something that needs to be at the forefront of your mind and something that you need to be thinking about on a daily basis as you vacation.

Travel safe!
